PGXperts PRIM – Personalized Risk Management in the Medication Process

More than 30 hospitals trust
in our innovative solutions

PGXperts GmbH
Bahnhofplatz 11
90762 Fuerth, Germany

PGXperts PRiM

Personalized Risk Management in the Medication Process

“PGXperts is seamlessly integrated into our hospital’s medication process. Recording medication history is simplified and discharge medication can be created intuitively. Drug interactions can be identified with a single click – overall, it’s an outstanding tool for improving patient safety.”

Daniela Waterfeld

Physician Assistant B.Sc., Cardiology
Hessenklinik Stadt Krankenhaus Korbach

“With just one click, I can access a large amount of drug interaction information – impressively simple. The automatic transfer of the scanned medication plan into the hospital’s formulary is very practical and saves time.”

Christian Benkel

Head Pharmacist
St. Theresien-Hospital Nuremberg

“The user interface is clearly structured and transferring data into our electronic patient record is very straightforward. At discharge or transfer, a medication plan can be created quickly. In addition, the DTS-check provides valuable support by highlighting potential pitfalls in medication management.”

Uwe Linnebacher

Medical Assistant in Orthopedics and Trauma Surgery
Kaiserin-Auguste-Victoria Hospital Eringshausen

“From the kick-off to the final implementation, the collaboration with PGXperts was excellent. The medication tool is intuitive to use and provides noticeable relief for both medical and nursing staff.”

Willi Schnitter

Head of Administration
Becker Klinik Bad Krozingen
